

a a race decision, delegated

b speed bought with exposure

SAFE +1 step, no added risk

**UNSAFE +1.5 steps, and a setback
can wipe out the whole payoff**

a setback's chance is the stated
maximum times the share of its own
moves that were Unsafe

at least 5 rounds, then a 20% chance of
ending after each; 100 to the leader
at the end, 50 each if the two tie

c the stage payoffs

		rival	
		Safe	Unsafe
OWN	Safe	1	0.6
	Unsafe	2.4	2

what it earns this round

Unsafe pays more, either way

d three lenses on one race

how far does the stated danger move it?

the maximum is set to 0.1, 0.6, 0.9,
against a copy of the same model, 9 routes
(5 admitted to the main panel)

how far does the rival move it?

the rival becomes fixed code it can neither
influence nor be told about, 4 strategies
across 5 admitted routes

do people or theory show either shape?

the same race played by 340 people, and the
evolutionary benchmark built for it
