

Extended evidence atlas — robustness, rank, identity, theory, and XAI

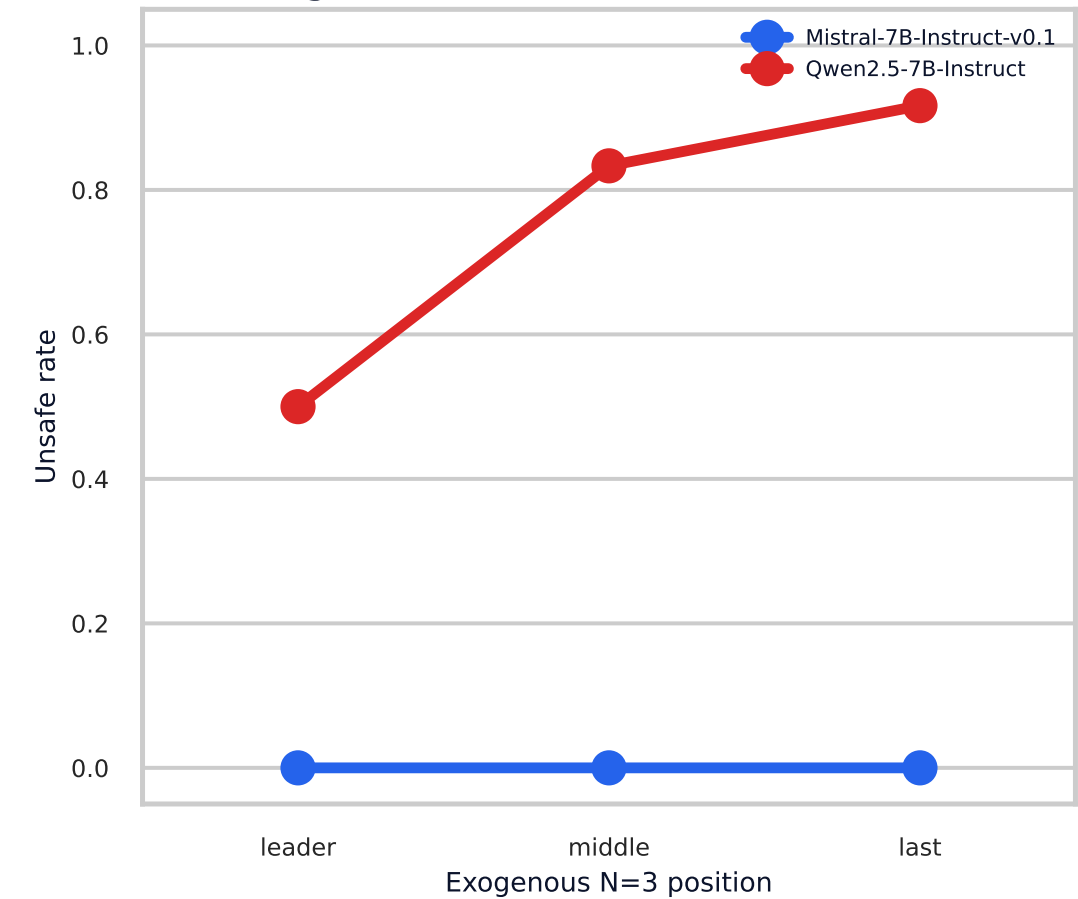

A. Context ranks persist, magnitudes move

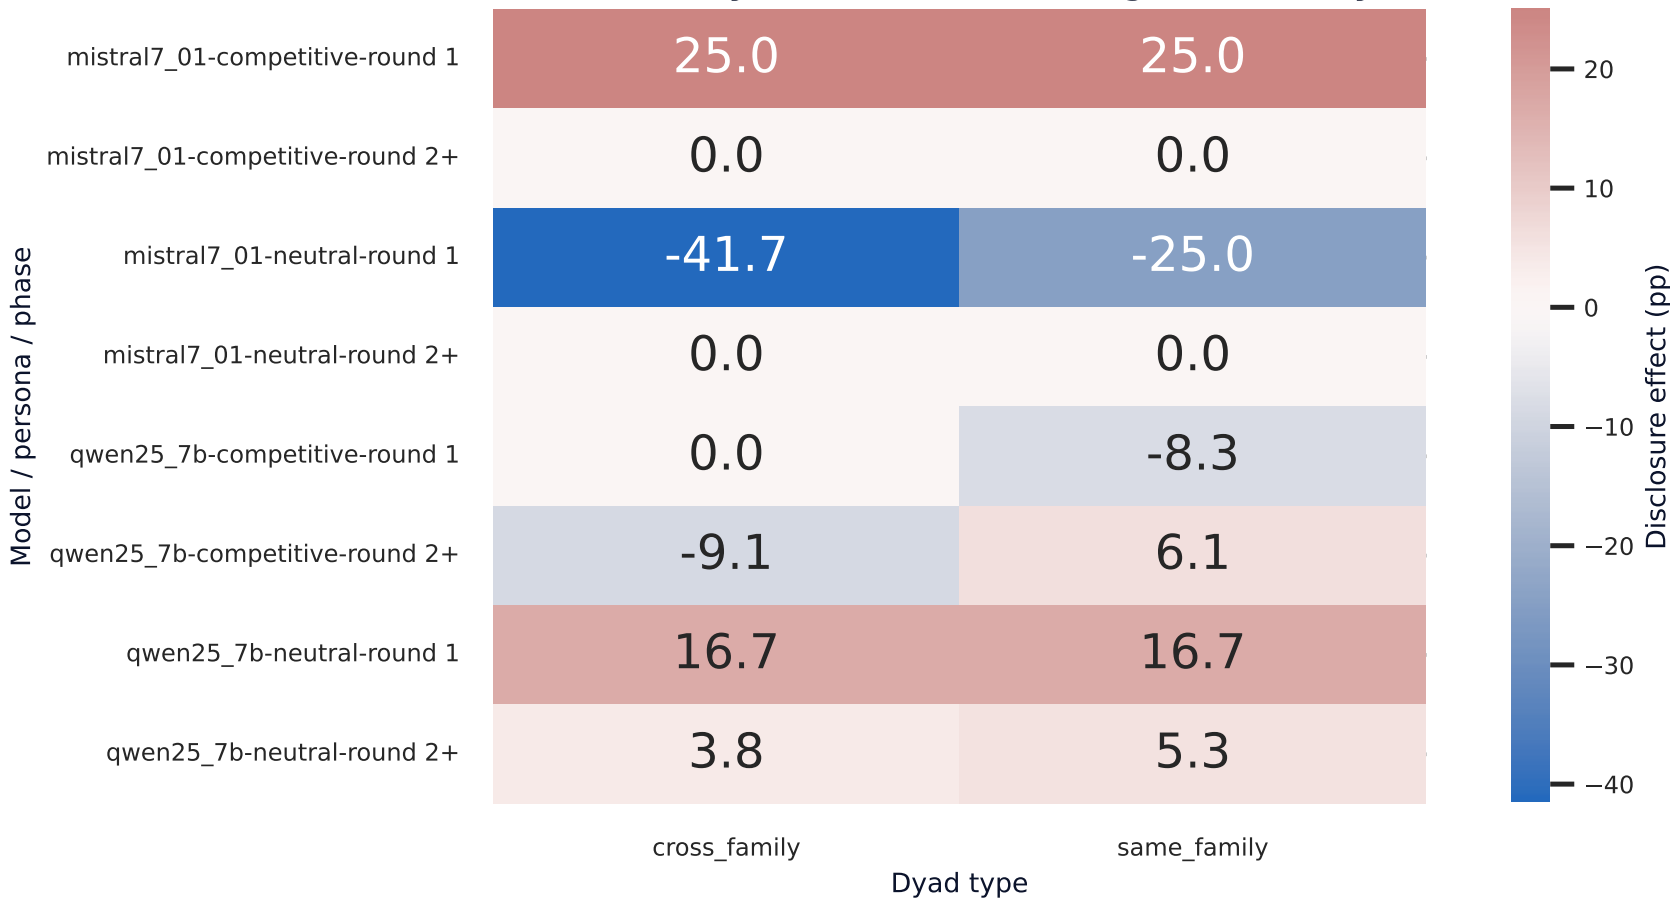

B. High local agreement still compounds

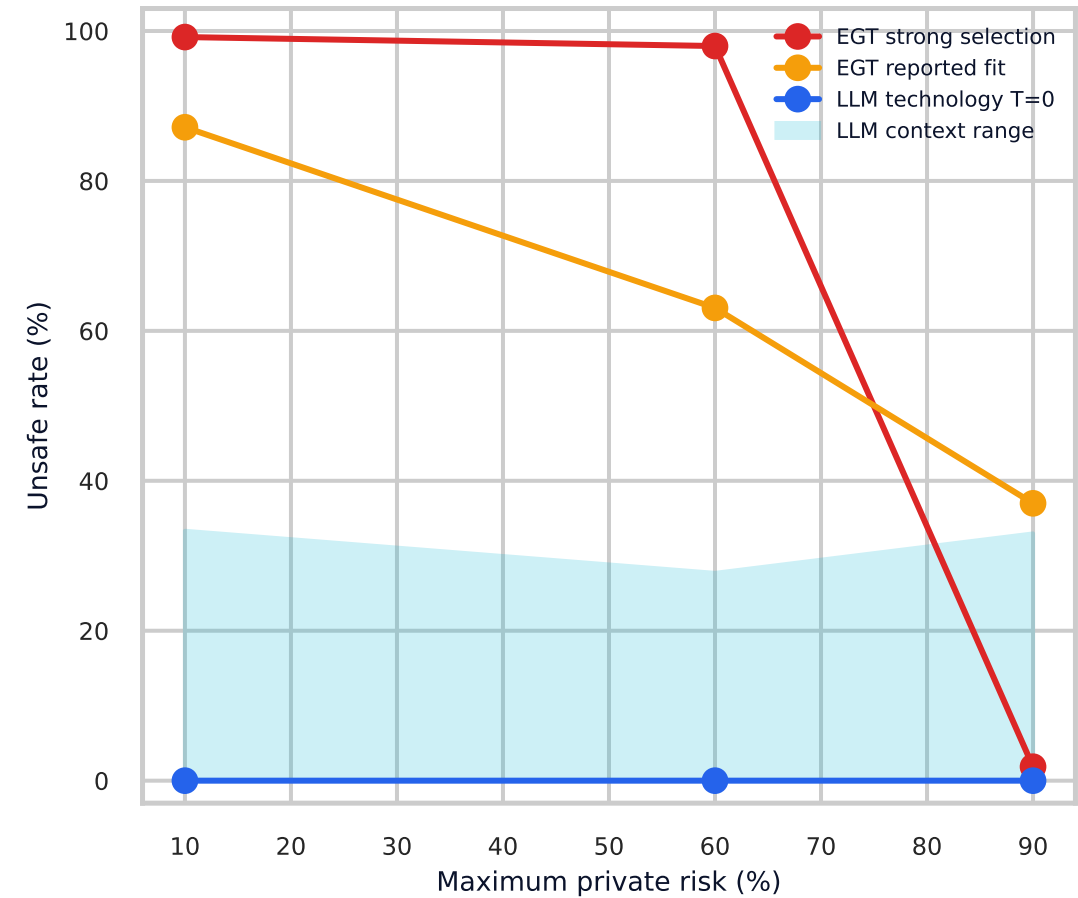

C. Falling behind matters for Qwen, not Mistral

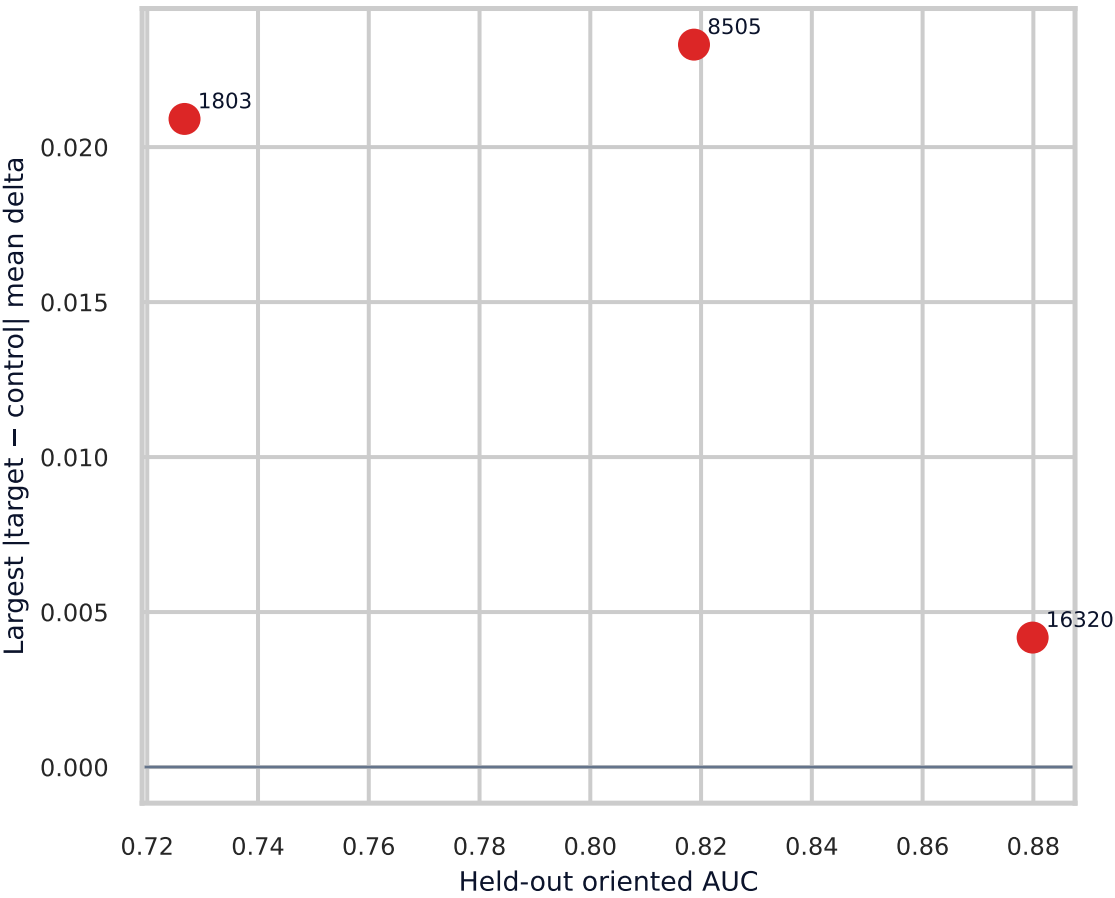

D. Identity disclosure is strongest at entry

E. Reproduced theory is not the prompt policy

F. Predictive features do not clear causal controls

Diagnostics remain checkpoint- and protocol-scoped. Position is fixed-state; identity is disclosed; theory and LLM trajectories are different processes.
