

a the name already drew this line

9 of 9 agree. exact permutation $p = 1/126 = 0.008$,
over the $C(9,4) = 126$ ways to relabel the tiers. $n = 9$ endpoints.
a size word is mini, nano or lite as a whole word of the name:
gemini is not mini. counting flash as one too: 8 of 9, $p = 0.040$.

b one domain does all the refusing

c and it is the one that tracks behaviour

Panel b. Ring, below a gate: a route must clear 75% on state reconstruction and on terminal scoring and 80% overall, and state reconstruction is the only one of the three that refuses all four. Dot: none or all of that column's calls, a value with no room on one side and so not a distance.

Panel c, Spearman correlation with the risk response; grey marks the domain every route answered perfectly, an absence of variation and not of data.

Gemini 3.5 Flash Lite was audited on probe set version 8, the other eight on version 7.
