

every route drawn here sits below every human draw, at every risk level
the only cells in this study that reach the human range belong to
5.4 mini and 5.4 nano, which the validity screen refused
the human row is the median of the 20,000 matched draws
15 is against a null of 20 participants; against one of 10 complete
dyads, which matches the model cells' independence, it is 13 of 15
