

Adversarially-framed players pull back slightly as more groupmates are also adversarial; cooperatively-framed players are unaffected by peers

N=3 races, OpenAI coopadv sweep (8 seat-composition codes x 2 models, 30 races/code, 90-180 players/point).
Own-framing effect (adversarial vs cooperative) replicates the 2-player S_AA/S_CC finding; the peer-count slope is the new result.
