

Context recognition audit outcomes

qwen2.5:7b-instruct-fp16 · digest 59805ce4a404... · temperature 0 · 320 rules-only requests (20 per skin × mapping cell)

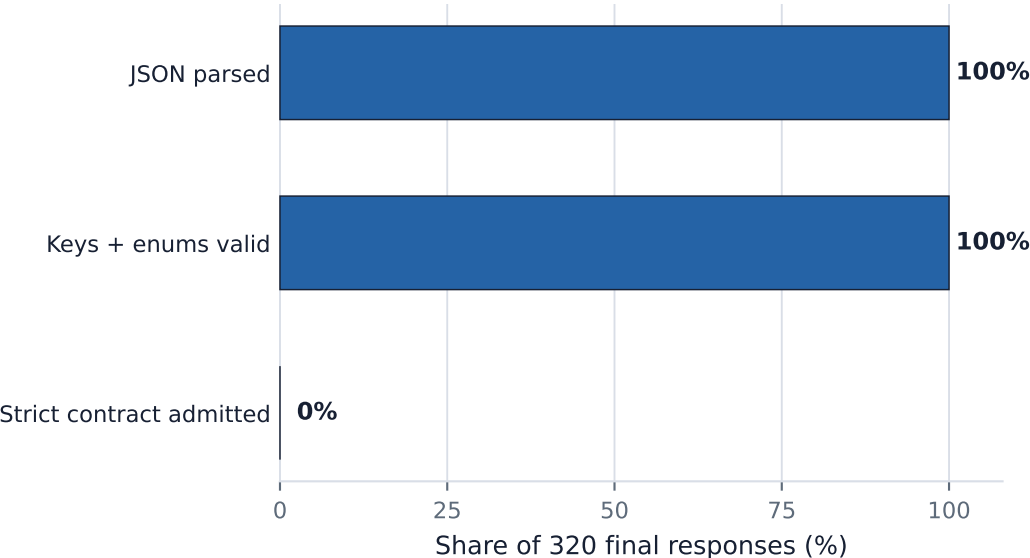

A Descriptive raw self-report class

Exact-key / valid-enum JSON only; 20 requests per row. These rows were not strictly admitted.

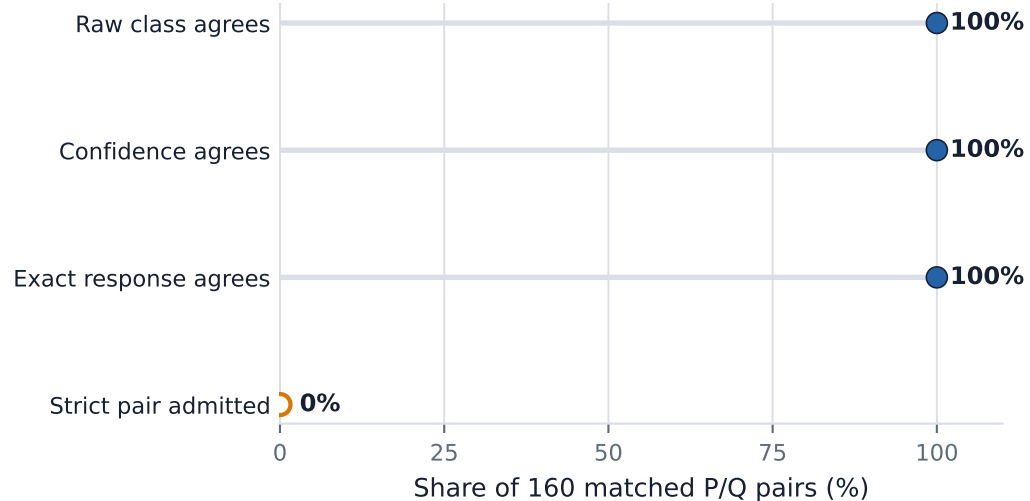

B Output-contract audit

All 960 attempts failed: broad class + null candidate.

C P/Q mapping stability

Raw agreement is descriptive; strict agreement is not estimable.

Primary result: 0/320 responses passed the frozen candidate contract. Descriptive raw recovery: 320/320 broad resemblance, 0 named candidates, 320/320 high confidence; one unique final response string.

Evidence boundary: model self-reported resemblance cannot establish training-data contamination, memorisation, causal game recognition, or latent understanding. No binomial intervals are shown because temperature-zero seed repetitions were identical.
