

[A] admitted [F] failed the comprehension gate
 all five admitted routes sit below every human draw, at every risk level;
 the only cells reaching the human range belong to two refused routes
 the human row is the median of the 20,000 matched draws
 21 is against a null of 20 participants; against one of 10 complete
 dyads, which matches the model cells' independence, it is 18 of 27
